Check the heading on this page This from Nostalgia sample collection page They make a superb collection of vintage instruments, check them out. The Boss DR55 Dr Rhythm was the first drum machine I ever owned. I had avoided them in the past because they were either too expensive or they only had cheesy bossa nova presets which were hardly appropriate for the electronica I was creating at the time. However, the DR55 changed that. Despite its limitations, Roland have to be applauded for bringing this little marvel out through their Boss brand name. You could play Variation A or Variation B or have A run into B for longer patterns. There was no song mode to chain patterns patterns had to be switched manually in realtime. It had four sounds kick, snare, rimshot and hihat. Naturally, they were electronically generated but you can hear the genesis of the later TR series in these sounds.

The kick, snare and rimshot were totally programmable but the hihat was switched with settings of OFF, 8ths, 12ths and 16ths. There was a simple tone control to rolloff some HF but this affected all sounds equally so was of limited use. Programming was strictly steptime. To write a pattern, you first selected the pattern memory you wanted to write into then flicked a switch to the WRITE mode. You then had to select the sound you wanted to program from a fourway slider switch and press START where you wanted a beat and STOP where you wanted a rest. Pressing either advanced you to the next step. Primitive but it actually worked very well. Of course, the thing had no dynamics instead, there was a fourth sound channel selection AC accent where you could program in an accent for certain beats although this affected all sounds falling on that beat. If only the hihat had been programmable. Interestingly, for such a budget unit, it had quite good sync facilities. You could drive an analogue or digital sequencer or arpeggiator from it and it would sync to Rolands own CSQ sequencers. Nowadays, it could be argued that the sounds have limited appeal unless youre doing early Soft Cell covers! but they are useful nonetheless. Both the Paia and the dr55 have spent some time traveling back and forth across the country, between myself and one of my music collaborators, and they have both survived. Im curious to try some dr55 mods. hmmm. Mars 100409 I first saw punk band, The Fast, who used one, and it was so cool looking, and so quick to change beats with, that I ordered one new from Mannys. I was able to sync it with an old Paia analog sequencer I had for some interesting loops. Both the Paia and the dr55 have spent some time traveling back and forth across the country, between myself and one of my music collaborators, and they have both survived. It was thrown in by the music shop when I bought a Juno6 and a bunch of cables. Its been a centerpiece of my home studio ever since.

Think early Depech Mode etc. Programming is pretty straight forward however without any kind of display its up to the user to count steps and keep track of the pattern in their head. Playback is simple and switching between patterns with the bigass knob is lots of fun. You cant slave the DR55 but you can use it as the master clock running a CSQ sequencer. There is also a programmable trigger output allowing you to create cool arpeggio patterns with something like a Juno6 or trigger additional drum sounds from another module. I use my DR55 to trigger a baseline on my Juno while I jam over top on another synth. As of 2012 these are still pretty cheap. I should also mention that the build quality of the DR55 is outstanding. Mine has endured quite a bit of accidental abuse over the years and still looks and functions like new. It even had a recent encounter with a sippycup full of milk and came out apparently unscathed. October 2009 Learn how and when to remove this template message It was the second entry in their DR series, following up on the much simpler DR55. It has an LCD graphic display, showing a step programming grid for the various drum voices. Rubberized touchpads each represent one of the DR110 voices, and can be used to build a pattern in realtime as well as to enter and edit note data. Tempo is continuously variable between 45 and 300 bpm. These devices had much the same functionality as the DR110, but relied upon digital buttonpress control of parameters rather than knobs. The cymbals and hihat are created by VCA shaping and bandpass filtering a combination of white noise and four non harmonically related square wave oscillators generating a much more realistic sound than white noise alone. The clap sound uses only shaped white noise, but was triggered by a multiple pulse train, to create a reverberation effect. No tonal variation of the voices is possible; however as with several earlier Roland drum machines, the relative balance is variable between the bass and snare drums versus the hihat and cymbal. An accent volume increase can also be added on any pattern step; the amount of accent is globally variable with a knob. Each pattern can be divided into 16 or 12 steps. A small battery retains memory content when the DR110 was switched off. This output can be plugged into a keyboard amplifier or PA system. The entire LED screen shows. The user turns the unit off and then on to exit test mode and go back to normal mode. By using this site, you agree to the Terms of Use and Privacy Policy.

The latter is similar to the rectangular pulse, with the exception, that instead of returning to zero volts, it goes into a high impedance state. This allows it to make use of the characteristics of an existing pulse shaping network, such as an RC network built into the drum machine. The pulse shapes have different sonic characteristics, experimenting which suits best is recommended. The Gaussian pulse for example contains less higher harmonics and can be used to simulate drums hit by a felt headed mallet. This allows it to sync the drum machine to the midi clock. Clock dividers and polarity are adjustable in order to achieve compatibility with all drum machines. Clock speeds between 48PPQN dync 48 and 1PPQN one pulse per quarter note are possible. By using the 16 pulse outputs, the uniPulse can output up to 21 different clocks simultaneously. We are constantly working on expanding a database of presets for common drum machines. For each channel, you can select pulse shapes, polarity, length, midi channels, note numbers and mappings. For sync outputs clock dividers can be chosen. A velocity sensitive test button can be used to instantly listen and refine your configuration, and thus choose what sounds best for your particular drum machine and taste. Dennis G. 5.0 out of 5 stars This DVD is one of the most effective tutorials I have ever seen. It arrived on the same day as the Boss DR800 and I'm very grateful it did. While the DR800 manual is very good, going through the DVD first was very helpful it totally demystified the nature of the device and instilled enthusiasm for using it. The gentleman providing the instruction is fantastic. He is clear, personable and articulate. He has a real talent for knowing when to elaborate. Every time I was unclear on a particular point, it was like he anticipated it and, in the next 10 seconds, addressed that point.

He also communicated his genuine appreciation for how cool a tool the DR800 is. I can't recommend this DVD highly enough. I think it's saved me hours in getting up to speed. I found it to be more than worth the money. This is an excellent tutorial. Period. Even without having the Machine in front of me I was able to follow the instruction very closely and understood the training fully. The instruction is thorough and interesting. The instructor actually adds some life to the training what could have been a boring and headbanging overload. He did a great job keeping me on track and interested throughout. I know I will be reviewing this DVD tutorial time and again until I've got this thing mastered. Great DVD, great price, and a can not do without, resource. Trying to learn this machine with just the owner user manual would be utterly exhausting. Thanks again to Amazon for providing another great product. It answered all my questions about the functions of this unit and I would buy

other products of this type from the seller. Did just what I expected it to do. The DR880 has so many features that even the most experienced artist could benefit from having a reference guide to unlock the full potential of the DR880. If you start out just using the buildin patterns, the more you use it, the more features you will want to use. The video definately helps getting started. The real learning starts with the doing. modifying patterns and building songs. What I first thought I understood, turned out not to be as clear as it seemed. I continue to go back to the video and catch details that I missed. coupled with the manual, it all comes together. My objective is to make music and not to fiddle with a machine. After you do a few patterns and songs, the process becomes more natural. Roland certainly know their stuff in seeking the experience and support of David Wills of ProAudioDVDs.com in making this video.

I already have other videos created by David for other equipment i own and my experience using these meant i had every confidence in the quality of this video. I feel Davids delivery on products he reviews to be excellent, very clear, very thourough and full of useful tutorials on everything you wish to know about your product. I am hopeless when trying to learn from paper manuals and I cant praise this product enough. Sorry, we failed to record your vote. Please try again. Sync system works only as master clock but ouputs triggers Memory the patterns memory is retained as long as there are batteries. However, proving that beauty is more than skin deep and size isnt everything, the most attractive aspect of the DR550 is that it earns its extra nought by packing a fair amount of sophistication into its compact frame. Most importantly, the new DRs drum and percussion samples match those of Rolands R5, R8 and R8M in quality in fact, a number of them have their origins in the Rseries library. At the same time, Boss have kept the 550s complement of sounds to a very creditable 48 the R machines have 64 each, which is a good deal more than have appeared on previous Boss drum machines for instance, the DR55 had four sounds and the DR110 six. Quite sensibly, Boss have opted for a solid collection of standard kit sounds leavened by a workable if not extensive selection of Latin percussion instruments. These batteries also preserve the contents of the 550s memory when the drum machine is switched off, so you need to beware running them down. SOUNDSTHE DR550s 48 samples are organised into eight categories kick, snare, side stick, tom, hihat, cymbal, percussion, effect.

There are five bass drums room, dry, solid, face and techno which between them provide a good range of acoustic and electronic kick sounds. The six snares are similarly varied in character, from the massive reverb snare through the ringing, rattling rimshot to the snappy TR808 snare. The toms category provides low, mid and high room toms along with the more resonant low, mid and high attack toms, and low and high electronic toms. TR808 samples crop up again in the hihats, which include the 808s electronicsounding open and closed hihats along with open, closed and pedal closed hihats of acoustic origin. More splashy sounds are provided by crash cymbal, ride cymbal and ride cymbal bell samples which, like the Rseries samples, capture the character of the sounds well, avoiding dissolving into undifferentiated highfrequency hiss in fact, I think these are Rseries samples. Here the fact that sample memory is at a premium on the 550 is most obvious, with these longer samples ending before you expect them to. All rights reserved.
