You can also select the key that you are playing in, and it creates an instant harmony with your playing. Separate controls for each voice level control and pitch control. Key switch This knob allows you to select the key that corresponds to the song being played. The HR2 then creates 1part or 2part harmony parts automatically. The HR2 can add one or two voices of harmony. The key can be selected and the interval and volume of each harmony can be independently adjusted. This instantly adds correct 2voice harmony to a guitar phrase. A new highspeed detection circuit ensures lightning fast response to speed picking passages. A Detector In jack allows correct pitch detection when combined with other effects. Discover everything Scribd has to offer, including books and audiobooks from major publishers. Im really looking to use the HR2 for its octave functions, though the harmonies may be fun to glitch around on and the detune may be kinda cool for getting an extra chorus type sound. I suppose my questions are as follows Are the octaves good on the HR2 I play postpunk stuff with ambient swells and sometimes postrock, so I figured this pedal could add an entire new dimension to the sounds of those swells and to some of my lead lines. Will I need to switch the key knob for octave sounds when I play every time. That seems like it could be annoying. I dont really want to complicate my setup with extra cables cuz space is more important to me. If I do trade for this thing, I assume I should put it right at the beginning of my chain after my tuner, correct. I see most people doing this and I understand that helps the tracking and itll feed my Muff clone a bit better. The Harmonist being offered is evidently a pink label. Does that make much of a noticeable difference. It tracked poorly and I didnt like the detune effect very much. It was quite unintuitive to control but I imagine you could get used to them after a while. I cant answer many of your questions because I played with it for only a few minutes, but in those eight or so minutes of fiddling, I didnt happen upon any pleasant sounding settings, so Id steer clear of it. The Boss PS5 and PS6 show up for far cheaper used, and more frequently, get

one of those and read the manual they have

online. <http://denetimmusavirlik.com/userfiles/crystal-water-de-filter-manual.xml>

Id rather get good octaves for swells, so I may refocus my attention on saving for a Pitchfork or something. If I were going to try to use the HR2, Id definitely be using the Detector In. If you did try it, that would be how I would do it too. Im about 99% sure that the HR2 would have a really hard time shifting the signals coming out of a Muff clone, whereas you will have a much better chance going in before it. Looks like Ill refocus on selling to fund the Headrush. All rights reserved Back to top. Happy to post for 5 anywhere in UK mainland, Ill make sure its very well packed.UK Royal Mail 1st class signed delivery included in the price. Possibly open to trades for other pedals try me.All pedals in good working order, a few have superficial marks and chips so Ill go into detail where I can but theyre all in good condition generally.

Ill include boxes and leaflets where available too but if I havent photographed a box I didnt receive one when I bought the pedal.Further pictures and details available on request. Chip on the top right and bottom right corners. Footswitch pops a little but as an always on effect it never bothered me. Various chips all over but, while beautiful, the paint on these is rather brittle. Really great sounding and faithful reproduction of the Maestro BASSMASTER. Can often be a few weeks lead time on these, mine is available now Some superficial scratches but nothing major. Pretty much as new.Didnt really get much use our of it but a cool effect nonetheless. Have a few preferred chorus pedals so moving this on. Footswitch is a little poppy and theres some low level background noise but Ive experienced the same thing on a couple if these pedals. Pretty sure I have the box somewhere for this one. Probably only been charged about 2030 times, so plenty of life left in it.LS2 rubber base removed cleanly and will be included.Asking 100 for the three. I had to use it to believe that a good power supply will get rid of all unwanted noise in the signal chain, compared to a cheaper one. I actually have 4 of them, gathered throughout the years, all still working flawlessly, and use all four plugged in a power strip under my Pedalboard Classic JR giving me a total of 2000mA and they power 89 pedals mostly analog but also a couple of digital ones without any problems. No ground loops, no unwanted noise, no need for a professional power supply such a cioks yet. Works really well and the build quality is top notch. I Have used them both live and in studio. One minor complaint is that the cable is really really long which is useful when youre trying to reach a socket thats far away but for me that I use them with a power strip under my pedals it can get a bit cluttered under my pedalboard when I have the four of them together. Send report Total quality A really reliable power supply YossMarr, 11.03.2020 I originally bought this for my Dunlop Crybaby Classic GCB95F, because I wanted to invest a little more in the power supply in safety's sake. Though it didnt fit through the hole for the power supply on the pedal, Ive found another use for it and am happy to have bought it, because it looks and feels like a reliable and durable piece of technique and theres nothing cheap about it, dont you worry its worth it. It has a safety measure in an extra housing so that if something went wrong the pedalboard would be safe. Whatsmore it has a fancy blue light that shows whether electricity flows through it. In conclusion, its a really nice power supply worth the investment.
